About Us

A Fresh New Take on Security

With over 40 years' experience in the security industry, we are well versed in all matters of security. As we develop Southern Fire & Security, we bring to the table new ideas, enthusiasm and dedication to what we do – providing you with a fresh look on an old theme.

Qualified, Professional, Experienced Team

Our team work together as one, overseen by Brian Skett and Steven Wilson. However, we don't follow a traditional hierarchy system; instead Brian and Steven both work as part of the crew, offering insights and advice on-site to ensure the service we provide is second to none.

The Complete Security & Fire Package

With our extensive knowledge base of all aspects of the security industry covering alarm systems, fire alarms, CCTV, access control, door entry systems, automation and manned Security, we offer a quality and professional service aimed at giving you complete peace of mind.

Peace of Mind Through Exceptional Service

When it comes to fire and security, you can't be too careful. Safety is top of our priorities, and our ethos is to offer our customers peace of mind through an exceptional service.

Fire Alarm

From designing and installing to full maintenance and repair.

Whether you are looking for a completely new fire alarm installation, or a new fire alarm system to replace an old model, Southern Fire & Security are here to help.

Not only will you be delighted with the service we provide, but our extensive design and installation programme is also recognised and approved by industry leaders.

Choosing Your Fire Alarm System

Whatever type of alarm you prefer, each fire alarm detection system that we design and install is guaranteed to meet the criteria of BS5839-1:2017, and BS5839-6:2013.

Our systems include:

- ✓ Conventional systems
- ✓ Addressable systems
- ✓ Wireless systems
- ✓ Hybrid Systems

Tailored to Your Individual Needs

The first step is to carry out a full site survey, where one of our team experts from Southern Fire & Security will discover more about your individual needs, based on your business or property. We will then advise you on the most appropriate system and products for you, while providing you with a competitive quote.

Following your approval, our team of experienced engineers will start the process of installing your new fire alarm system. All our team are fully qualified and frequently trained to meet industry standards and health and safety regulations; you'll be in the hands of experts throughout the entire installation process.

Intruder Alarm

Protect your property with a state-of-the-art intruder alarm system.

Peace of Mind with Maximum Security

With a quality alarm system, not only can you relax in the knowledge that your security is taken care of, you also gain peace of mind knowing your property is completely protected with options for 24hour emergency call out service, smartphone notifications, remote monitoring and multi-zone sensors.

Choosing the Right Alarm System

When you are looking for the right intruder alarm system, considerations have to be made on the size and type of the property, wireless or hardwired, monitored with keyholders or is a police response required and how you wish to operate the system.

At Southern Fire and Security we supply and install a number of different alarm systems, from multiple manufacturers. By being impartial we are able to offer the best solution for your unique needs.

Talk to one of our experienced advisors, who will be happy to discuss all the options for you, helping you to decide what system suits your requirements best.

Fully Qualified, Professional Installation

Don't leave it to chance - make sure your intruder alarm is installed by the experts.

Our intruder alarms are installed by highly trained engineers; with years of experience and knowledge of a wide range of systems.

All of our installation engineers are fully qualified and undergo regular professional training to ensure they are current in their knowledge, as well as ensuring they meet industry standards and health and safety regulations.

CCTV System

A surveillance system to deter and capture incidents – essential for your security.

Need an extra pair of eyes? Perhaps it's time to think about installing a CCTV system.

Why install CCTV?

CCTV allows you to watch what is going on, even when you are not around. Whatever type of business or property you have, the benefits of CCTV are numerous and include:

- ✓ Protect your employees by monitoring interactions from the public
- ✓ Deter potential criminals and prevent your property from becoming one more victim of crime
- ✓ Are you constantly hounded by shoplifters? Install CCTV in those hard-to-see corners and catch them in the act!
- ✓ Prevent occurrences of vandalism
- ✓ Monitor your premises and give yourself peace of mind
- ✓ Tell your insurers you have CCTV installed and save on your insurance premiums.

CCTV affordably outperforms static guards and mobile patrols, while allowing you to monitor your surveillance system from anywhere in the world via the internet.

Where can you use CCTV?

Whether you have a private property that you feel needs more security, or you run a professional business such as a restaurant, shop, factory or warehouse, Southern Fire & Security offer the perfect solution to all your CCTV needs.

What we offer

We supply cameras, lenses and digital recorders to fit your every requirement. All our CCTV Systems comply with industry standards and can be monitored 24/7 in our Alarm Receiving Centre (ARC). For complete flexibility, all our systems have the facility to be setup for online remote viewing on smart phones and computers anywhere in the world.

Access Control

Access control systems provide flexible security and control over who may enter a site or building and when.

The solutions supplied by Southern Fire & Security cater for one door properties; up to hundreds across multiple sites, making sure your assets are always secure.

Design, Installation, Service & Maintenance

At Southern Fire & Security, we have access control systems to cater for all sizes and scales of business. Paxton is one of our partners in this field and its range consists of the Compact, Switch2 and Net2. However, we are not limited to this range, so should your preference be with another preferred manufacturer then please contact to discuss the alternative.

The Uses of Access Control

As well as giving control over entry and increasing the security at your premises, windows based access control systems provide the following uses:

- ✓ Replacing Fobs/Cards When a Staff Member Leaves
- ✓ Control Different Areas of the Building for Specific People
- ✓ Restrict the Hours These Doors Can be Used
- ✓ Staff Time Keeping

How Access Control Systems Work

Once such equipment is in place, all doors controlled by the system will automatically lock when the door is closed. Anyone without a PIN or access token/card is unable to enter. If necessary, doors may be set to unlock during a pre-set period. Access control systems may need to be integrated with fire detection systems for compliance purposes and door/gate automation and door entry for security and convenience.

Door Entry

A secure door provides maximum protection. With our range of door entry systems, we can provide you with the right option for your individual needs.

Our door entry systems include telephones, panels and video monitors; plus, we can combine coded access systems for more in-depth security.

Why Use Door Entry Systems?

If you are wondering if a door entry system is for you, consider the following:

- ✓ Door intercom systems provide an easy method to manually ensure that only those you choose to allow access to your property enter.
- ✓ Door entry systems give you the added security of knowing who is at your door at any time, without having to peer through a peep hole.
- ✓ Door entry systems provide a more efficient method of access for those living in upper floor apartments or flats.
- ✓ Door entry systems provide security to those who feel vulnerable opening their front door.
- ✓ If you fit into one of these categories, it's time to consider a door entry system.

From One Door Intercoms to Multiple Station Systems

Our systems range in size from the simplest one door intercom to multiple station systems for commercial and residential premises.

We supply and maintain all the major brands, including:

- ✓ BPT
- ✓ Comelit
- ✓ Fermax
- ✓ Bell systems
- ✓ Telguard
- ✓ Videx

School Lockdown System

Remove your students and staff from any kind of potential danger during an emergency situation.

As a result of the escalating threat of firearms, weapons and terrorist attacks on schools, a Dynamic Lockdown Procedure provides an effective strategy to rapidly restrict access to the premises.

The need for robust and effective procedures to protect children, staff or customers and to minimise risk is, sadly, now an essential consideration here in the UK. A Dynamic Lockdown Procedure provides an effective plan to quickly restrict access to and movement throughout a building (or area within a building) through actions and physical measures in response to an imminent threat.

Instances of where this may be used include:

- ✓ A reported incident in the vicinity
- ✓ An intruder on site
- ✓ Air pollution or any kind of airborne contaminant
- ✓ Dangerous dog or animal in the vicinity

The Wireless Alert system is aimed at schools and other places of learning as a lockdown system in the event of an incident requiring rapid restrictions to a site. It is quick and easy to install with no civil works or cabling required and is fully portable.

This is a battery powered system that will, when activated, give an audible and visual Lockdown alert with the aim of minimising disruption to the learning environment whilst ensuring the safety of pupils and staff.

An IP Masthead can be added to the system so that up to 250 units can be monitored and controlled from one central location. This can be, for example, the site office computer or a Central Monitoring Station (CMS). To facilitate this function, we can provide a dedicated PC and mobile app. Additionally, you can assign a name and location to each unit, ensuring a quick and efficient reaction to any alert event.

It is vital that schools have a lockdown procedure in place alongside their fire procedures. The aim of any school lockdown is to prevent pupils or staff moving into danger areas and preventing or frustrating the moves of a potential attacker. This system uses voice enunciation which differentiates from an evacuation alarm.

Please contact Southern Fire & Security to discuss the options available.

Service & Maintenance

Our responsibility for your domestic or commercial security doesn't end simply after your security system installation has taken place.

Regular, scheduled maintenance of security systems is highly recommended. Fire detection, intruder and access systems often require regular scheduled maintenance in order to comply with insurance policy terms and conditions.

Southern Fire & Security undertakes scheduled or one-off maintenance for most security systems across London & the Home Counties, including systems installed by other security companies.

Signing up for a service and maintenance contract may seem like an unnecessary and costly exercise but it is the only way to ensure that your Security System remains in full working order.

As an **NSI Silver approved** electronic security installer with 40 years' of experience, Southern Fire & Security are able to provide you with the best possible service.

Here are the main areas our contracts cover:

- ✓ Fire Alarms
- ✓ Intruder Alarms
- ✓ Access Control
- ✓ Door Entry
- ✓ CCTV
- ✓ Automated Gates
